Ember.js  
jQuery  
Jekyll

## Education

### Bloc

Full Stack Web Developer Track 2017

### Hofstra University

BA Business - Marketing 2011  
Minor International Business 2011

## Employment

### State Farm Insurance

Account Representative

Bethpage, NY  
Jun 2011 to Current

- Sell personal lines and business lines of insurance.
- Exceeded \$1M in first year premium sold over last 6 years.
- Work closely with clients to ensure a positive experience and proper coverage.
- Assist with overall marketing tactics.

## Projects

### SiteStash

Aug 2017 to Sep 2017

A Bookmarking website that allows users to create their own topics and index websites in the appropriate topic for later use. Users can then update and delete bookmarks and topics at will as their interests change. For times when a user doesn't have access to their SiteStash account but discover a site they'd like to bookmark, they can email the site with the topic name and bookmarked website. Their site will then automatically be saved to the appropriate location in the database.

Technologies Used:

- Ruby on Rails
- Devise
- Pundit
- Faker

### Boombocs

Mar 2017 to Apr 2017

A music player application inspired by Spotify, built using AngularJS with full audio controls and a responsive layout.

Technologies Used:

- AngularJS
- jQuery
- Bootstrap
- Buzz

### Kele API Client Gem

Jul 2017 to Aug 2017

Fully functional API Client Gem created to communicate with the Bloc program's REST API and access course checkpoints, message a mentor, or submit work.

Technologies Used:

- Ruby
- HTTParty Gem
- JSON Gem

### Bloccit

Jun 2017 to Jul 2017

A Ruby on Rails application that draws on the simplicity of Reddit. Users can create, read, update, and delete articles in topics. They can also up or down vote them, changing the order in which they're presented. An algorithm that takes into account vote popularity along with date of creation determines the order in which articles are shown.

Technologies Used:

- Ruby on Rails
- RSpec
- BCrypt
- Bootstrap
